

# Developing Websites for Multiplatform Use

## Bookstore part 6 – user account

This part of the bookstore project implements a basic user account page that allows them to view their previous orders.

The **project files** are stored at **Developing Websites for Multiplatform Use > Files > 7 Bookstore 6 – user account > part 6 files.zip** which contains:

- Screenshot for the user page.
- Screenshots for the order-head and order-row components.
- Screenshots for the updated components and sql class.
- Complete PHP file for the no-order-found component.

### Concepts covered

- Getting data from several tables at once using inner joins.
- Outputting orders grouped by order ID.

### Instructions

1. Add **no-order-found.php** to the components folder.
2. Using the screenshots, create the following php files in their associated folder:
  - a. **users.php** at the project root.
  - b. **order-head.php** and **order-row.php** in the components folder.
3. Update the following classes:
  - a. **components.php**: add the `orderList()` function.
  - b. **user.php**: add the `getOrders()` and `getTotalOrderPrice()` functions.
  - c. **sql.php**: add lines 29 to 42.
4. Test in the browser by navigating to [localhost](http://localhost) and get the application working.

## File and folder structure

Items in **red** require creation or updating using the provided instructions and screenshots.

### classes

- basket.php
- book.php
- **components.php**
- connection.php
- orders.php
- **sql.php**
- **user.php**
- utils.php

### components

- basket-empty.php
- basket-footer.php
- basket-header.php
- basket-row.php
- book-card.php
- book-single.php
- footer.php
- header.php
- no-books-found.php
- **no-orders-found.php**
- no-single-book-found.php
- **order-head.php**
- **order-row.php**

### css

- style.css

### icons

- nav-button.png
